

# FREEWALL

OPENING YOUR MIND TO CREATIVE STORAGE WALL

## Concept

**FREEWALL** offers unlimited scope to create efficient storage systems in any office environment. Our unique design led approach and in-house manufacturing enables us to create bold or sympathetic statements for any organisation.

**FREEWALL** allows flexible configurations with an array of unit styles that meet the demands of today's dynamic businesses.

**FREEWALL** is individually designed to fit from floor to ceiling and from wall to wall, maximising the amount of space available.

Maximise  
Divide  
Enhance

The use of room dividing units and pass through doors enhance the versatility as well as eliminating the cost, time and space in creating additional walls or partitions.

The use of different unit styles allow the customer to seamlessly integrate with the storage around them, to provide a solution that best fits their needs.

The standard modules in three depths and six widths have a fully integrated internal storage and filing system for creating efficient storage solutions.

**FREEWALL** offers the unique blend of modular space planning footprints with the flexibility of bespoke frontages, that are tailored to each customer's needs. The units can be designed to fit around elements within the building structure as well as keeping a fluid feel to the working environment. Many different levels of interaction and privacy can be incorporated not only within an office but to an individual wall of cupboards.

Stepped room dividing wall

The simple yet robust construction allows the units to be built quickly whilst offering unrivalled strength, stability and durability. The units are all made to fit exactly at the factory, eliminating time on site as well as minimising disruption, especially where buildings maybe already in occupation.

# Application

It is paramount that there is an effective appraisal of the immediate and future needs of an organisation's storage requirements.

**FREEWALL** can then be integrated into the demands of the workforce and the office environment. An example of this was the demand for more desk space whilst achieving faster access times to the filing. The solution was to use side opening and up and over tambours enabling the footprint in front of the units to be greatly reduced, providing an open face for document retrieval without chance of damage or injury through doors being left open.

Effective

Library storage

**FREEWALL** offers solutions to new working practices in a way no other storage system can. The ability to change and meet these demands is achieved through the flexibility in design, versatility of the materials used and the quality of the fittings and components. This is shown in applications where units need to be capped at any height due to high ceilings or perimeter air conditioning vents. Also, the integration of different ways to access the stored material, such as bookcase sections for referenced material whilst incorporating low level cupboards for personal security.

Bookcase / cupboard storage

Locker units / pass thru door

Locker units

The dynamic working practices of the modern organisation need flexible solutions. The improvements in technology and the introduction of flexible working, has put new demands on the office of today. **FREEWALL** can provide personnel with docking stations or lockers allowing a transient feel to their workspace. This enables a rationalisation of the number of workstations and resources needed as well as savings in floor space.

**FREEWALL** gives designers the freedom to create units that reflect the style of the company or environment. This can be achieved through bespoke units, contemporary material choice and fittings. This enables the customer to enhance the workplace and reinforce the company's identity. The realisation of this is shown through a range of visuals from simple line drawings to 3D computer graphics.

**FREEWALL's** mix of modern manufacturing techniques and new materials has created an endless depth of design opportunities. The ethos of providing efficient storage solutions is not lost, simply enhanced. Wave and curve walls epitomise this trend, reflecting the styles of today's workstations and desks. The clever contrast of different finishes enhances still further a modern and more fluid feel to any storage area.

Bespoke AV walls

**FREEWALL** can provide bespoke Audio Visual walls that make the right impression whilst also integrating the latest technology. The units can be designed in any configuration or style and in any finish, including wood veneers, laminates and mfc. We can match to or manufacture the conference or boardroom tables too. This approach provides a turnkey solution to the needs of meeting and presentation areas.

When presented with a problem **FREEWALL** always projects the right image. In the boardroom, **FREEWALL** can harbour a host of facilities for professional presentations. Audio visual technology, plasmas screens, projector screens and video systems, dry wipe boards and flip charts are easily accessed whenever they are needed and swiftly concealed when the client meeting, training session or staff briefing ends. This imaginative and unobtrusive arrangement safeguards expensive equipment, adds security and guarantees that meeting areas remain business like at all times.

# Function

Quality  
Detail  
Choice

**FREEWALL** has been designed to the highest standards and is unsurpassed on the choice and specification of the materials, fittings and components used. The system is based on a solid structure of 22mm thick melamine faced chipboard, which also has a soft seal edging front and back, offering a large reduction in noise or dust penetrating the unit. The system is mounted on adjustable levellers which in turn rest on the head and base track, this reduces point loads, increase stability and stops noise passing under or over the unit. The modules are built using a shared carcass which is drilled on both sides with a pitch of 32mm. The rigid construction consists of 15 or 18mm back panels which are fixed to the side carcass with heavy duty brackets. The cupboards can be dismantled and relocated any number of times as all structural fixings are made into threaded inserts. The doors are all hung on 180 degree opening, exposed knuckle hinges allowing doors to be folded right back eliminating the risk of collision or damage in busy areas. The doors are also fitted with a three point espagnolette locking mechanism with locks having numbered cores which can be removed and changed.
